INTRODUCING THE FIRST EFFERVESCENT PACKET THAT DISSOLVES IN BRINE

A Patent Pending, Dual-Film Process Leads To Breakthrough

A Technological Breakthrough

Safe-T-Fresh™ has created QuickBlue™, the first dual-film effervescent packet that dissolves in brine. This extraordinary, patent pending process combines PVA film with a paper back to produce a dynamic deodoriser for events and cold weather.

Along with its increased solubility and improved handling, QuickBlue's effervescent action quickly disperses the contents to create a deep blue, odour-fighting solution.

And, QuickBlue Event & Winter is the perfect way to reduce your deodoriser inventory costs and improve your service. Instead of stocking an event and winter deodoriser, now you can manage just one product. The pre-measured packet also guarantees more consistent service!

As cold weather is here, consider using QuickBlue, the only packet you'll ever need for events and winter weather.
